**DETAILED ACTION*****Allowable Subject Matter***

1. Claims 1-38 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The prior art, U.S. Patent No. 6,377,949 to Gilmour, teaches queries that search through profiles and detect a predetermined degree of correspondence between the identified terms and any one or more of the user knowledge profiles. In the event that a predetermined degree of correspondence is detected, the sender of the electronic document is prompted to either accept or decline the proposed recipient as an actual recipient of the electronic document. The reference fails to disclose the creating of document links within a content catalog, wherein the document links link to the plurality of documents stored in the document management system and organized based on the closeness values. Furthermore, the reference fails to disclose the creation of a user link in the content catalog, wherein the link links to the user profile and is organized in the content catalog based on the affinity strength of the affinity.

In reference to independent claims 1, 11, 16, and 31, the claimed features of determining closeness values for each document based on a relationship between the document content and the topics with which the document is associated, creating a content catalog, creating document links in the content catalog, and creating a user link in the content catalog wherein the user link links to the user profile and the user link is organized in the content catalog based on the affinity strength of the affinity, is not shown in the prior art of record and would not have been obvious to one of ordinary skill in the art to come up with applicant's claimed invention.
